

SADHIK KANALA

DevOps Engineer | Kubernetes | AWS | CI/CD | Terraform

+91 9182229587 | sadhikkanala@gmail.com | [LinkedIn](#) | [Github](#) | Bengaluru, India

PROFESSIONAL SUMMARY

DevOps Engineer with 4+ years of experience across the full DevOps lifecycle — Kubernetes-based container orchestration and management, AWS cloud infrastructure and deployment models, automation via scripting (Python, Bash, Ansible), CI/CD pipeline build/troubleshooting, and security best practices for cloud and container environments. Sole DevOps owner for a FinTech payments platform (AWS EKS) processing 1M+ transactions/month — cut deployment lead time by 40% and production incidents by 60% using Terraform, Helm, GitOps (ArgoCD), and automated Jenkins/GitHub Actions pipelines, while integrating SonarQube and Trivy for pipeline security. Proven track record across FinTech and Telecom enterprise environments.

TECHNICAL SKILLS

Kubernetes & Container Orchestration: Kubernetes (AWS EKS), Docker, Helm Charts, RBAC, HPA, Ingress, ConfigMaps & Secrets, Rolling/Blue-Green Deployments

Cloud Infrastructure & Deployment Models: AWS (EC2, VPC, IAM, S3, EKS, RDS, Lambda, ELB, ASG, Route 53, ECR, CloudWatch), Terraform (Modules, Remote State, Workspaces)

Automation & Scripting: Ansible (Roles, Playbooks), Bash, Python, Shell Scripting

CI/CD Pipelines & Troubleshooting: Jenkins (Pipelines, Groovy Scripting), GitHub Actions, ArgoCD (GitOps), Release Management

Security Best Practices (Cloud & Containers): Trivy, SonarQube (SAST), IAM Least-Privilege Access, Secrets Manager, CIS Benchmarks, ISO 27001, Vulnerability Remediation

Observability & Documentation: Prometheus, Grafana, AWS CloudWatch, Technical Documentation (Runbooks, SOPs)

Linux Administration: RHEL, Ubuntu, LVM, Storage & User Management

PROFESSIONAL EXPERIENCE

Tata Consultancy Services (TCS).

2022 – Present | Bengaluru

DevOps Engineer | PayG Plus (FinTech Payments Platform, AWS EKS)

Aug 2023 – Present

Sole DevOps owner for a cloud-native payments platform processing 1M+ transactions/month; own the full DevOps lifecycle — CI/CD, infrastructure provisioning, Kubernetes orchestration, and production observability.

- Container Orchestration: Manage the full Kubernetes lifecycle on AWS EKS for containerized Java Spring Boot microservices — Deployments, Services, ConfigMaps, Secrets, Ingress, and Horizontal Pod Autoscalers — and standardize packaging, versioned releases, and rollback using Helm Charts across Dev, Staging, and Production.
- Cloud Infrastructure & Deployment Models: Provision AWS infrastructure (EC2, VPC, IAM, Security Groups, EKS) using reusable Terraform modules across three environments, and run Rolling and Blue-Green deployment models to achieve zero-downtime releases, cutting production incidents by 60%.
- CI/CD Build & Troubleshooting: Architect and continuously troubleshoot end-to-end CI/CD pipelines in Jenkins and GitHub Actions, diagnosing build/release failures and automating GitOps delivery with ArgoCD — cutting deployment lead time by 40% and eliminating manual release steps.
- Automation & Scripting: Automate operational and deployment tasks (health checks, provisioning workflows, release steps) using Bash and Python scripting to remove repetitive manual effort.
- Security Best Practices: Embed security into the pipeline by integrating SonarQube (SAST) and Trivy container-image scanning into CI/CD, and enforce least-privilege IAM policies and Secrets Manager for credential handling on the EKS platform.
- Observability & Collaboration: Built monitoring with Prometheus, Grafana, and AWS CloudWatch to proactively flag infrastructure bottlenecks, partnering with Development, QA, and Product teams in Agile sprints to improve deployment reliability.

DevOps & Infrastructure Engineer | TDCNet (Telecom Network Management Platform).

Aug 2022 – July 2023

Supported Linux administration, CI/CD, and infrastructure automation across 2,000+ production servers for an enterprise telecom platform.

- Linux Administration: Administered RHEL and Ubuntu production servers — user management, LVM, storage, and network configuration — sustaining a 99.8% uptime SLA.
- Automation & Scripting: Automated patch management and OS hardening using Ansible playbooks alongside Bash and Python scripts for monitoring/operational tasks, reducing manual effort by 70%.
- CI/CD Support & Troubleshooting: Supported and troubleshoot CI/CD pipelines (Jenkins, Docker, GitHub, Maven) for multiple application teams, resolving build and deployment issues; assisted with Docker containerization.
- Security Best Practices: Implemented security hardening and vulnerability remediation aligned with CIS Benchmarks and ISO 27001 standards.
- Documentation: Authored runbooks, SOPs, and incident-response documentation, improving MTTR by 25%.
- Monitoring & Collaboration: Reduced application downtime by 15% through proactive monitoring and automated alerting, working closely with DevOps and Operations teams to resolve infrastructure issues.

EDUCATION

B.Tech in Electronics and Communication Engineering

July 2022

Presidency University, Bengaluru — CGPA: 8.07

ACHIEVEMENTS

- Awarded twice by TCS for Excellence in Learning and Technical Experimentation; recipient of the TCS AI Igniter and TCS Innovation Award.
- Service & Commitment Award for sustained SLA compliance across multiple client engagements.
- Elevate Wings Award - Received for clearing Java and Spring Boot JWT internal exams with distinction.
