Career Summary:

Results-driven DevOps Engineer with 3.9+ years of experience in designing, automating, and managing scalable cloud-native infrastructure and deployment solutions on AWS. Strong expertise in CI/CD pipeline automation, Kubernetes orchestration, Infrastructure as Code (IaC), and production monitoring. Hands-on experience with Jenkins, GitHub Actions, Terraform, Docker, Kubernetes (EKS), ArgoCD, Helm, Prometheus, and Grafana. Proven ability to improve deployment efficiency, reduce downtime, automate infrastructure provisioning, and support highly available production environments across FinTech and Telecom domains.

Technical Skills:

DevOps & CI/CD	Jenkins (Pipelines, Groovy Scripting), GitHub Actions, ArgoCD, SonarQube, CI/CD Pipeline Automation, Continuous Integration, Continuous Deployment, Release Management
Infrastructure as Code (IaC)	Terraform, Ansible (Configuration Management)
Cloud Platforms	AWS (EC2, S3, IAM, VPC, ELB, ASG, EKS, Lambda, CloudWatch)
Containerization & Orchestration	Docker, Kubernetes (EKS), Helm Charts, Container Orchestration
Monitoring & Logging	Prometheus, Grafana, AWS CloudWatch, ELK Stack Concepts
Security & DevOps Best Practices	IAM Policies, Security Groups, Least-Privilege Access, Secure CI/CD Pipelines, Vulnerability Remediation, Patch Management, System Hardening
Linux Administration	RHEL, Ubuntu Linux, LVM Management, Disk Partitioning, Storage Management, User Management, Linux Server Administration, Troubleshooting
Programming, Scripting & Automation	Python, Bash, Shell Scripting, Java
Build & Version Control Tools	Git, GitHub, Maven
Tools	Postman, ServiceNow, HPESM, Jira, VS Code

PROFESSIONAL EXPERIENCE:

Tata Consultancy Services (TCS)
DevOps Engineer [Aug 2022 – Present]

PROJECT DETAILS : 2

Project Name : PayG Plus – Cloud Native Payments Platform

Role : DevOps Engineer

Duration : Apr 2024 – Present

Description:

Cloud-native payments platform serving 1M+ transactions per month. Responsible for complete DevOps lifecycle management including CI/CD automation, infrastructure provisioning, Kubernetes orchestration, monitoring, and production observability.

Roles & Responsibilities:

- Architected and implemented end-to-end CI/CD pipelines using Jenkins and GitHub Actions, reducing deployment lead time by 40% and eliminating manual release processes.
- Developed reusable Terraform modules for provisioning AWS infrastructure including EC2, VPC, IAM, Security Groups, and EKS clusters across Development, Staging, and Production environments.
- Containerised Java Spring Boot microservices using Docker and deployed applications on Kubernetes (AWS EKS).
- Managed Kubernetes resources including Deployments, Services, ConfigMaps, Secrets, Ingress, and Horizontal Pod Autoscalers (HPA).
- Implemented Helm Charts for standardised application packaging, version-controlled releases, and rollback support.
- Configured Rolling Deployments and Blue-Green Deployment strategies to achieve zero-downtime releases and reduce deployment-related production incidents by 60%.
- Integrated SonarQube with Jenkins pipelines for static code analysis, quality gates, and secure CI practices.
- Implemented GitOps Continuous Delivery using ArgoCD for declarative and automated Kubernetes deployments.
- Built monitoring and observability solutions using Prometheus, Grafana, and AWS CloudWatch to proactively identify infrastructure bottlenecks.
- Automated operational and deployment tasks using Python, Bash, and Shell Scripting.
- Worked extensively with AWS services including EC2, S3, IAM, CloudWatch, EKS, Lambda, ELB, ASG and RDS.
- Collaborated with Development, QA, and Product teams in Agile environments to improve automation, deployment reliability, and infrastructure scalability.

PROJECT DETAILS : 1

Project Name : TDCNet – Telecom Network Management Platform

Role : DevOps & Infrastructure Engineer

Duration : Aug 2022 – Mar 2024

Description:

Telecom network management platform supporting 2000+ Linux servers. Responsible for Linux server administration, CI/CD support, infrastructure automation, monitoring, security compliance, and production support across enterprise telecom environments.

Roles & Responsibilities:

- Administered and maintained RHEL and Ubuntu Linux production servers with 99.8% uptime SLA.
- Managed Linux administration activities including user management, LVM, storage management, and network configuration.
- Developed automation scripts using Bash, Shell Scripting, and Python for monitoring and operational tasks.
- Automated patch management and OS hardening using Ansible Playbooks, reducing manual effort by 70%.
- Supported CI/CD pipelines using Jenkins, GitHub, Docker, and Maven for multiple application teams.
- Reduced application downtime by 15% using proactive monitoring and automated alerting frameworks.
- Implemented security hardening and vulnerability remediation aligned with CIS Benchmarks and ISO 27001 standards.
- Assisted in Docker containerisation and deployment support activities.
- Worked on infrastructure automation, server monitoring, and production support.
- Prepared runbooks, SOPs, and incident response documentation improving MTTR by 25%.
- Collaborated with DevOps and Operations teams to troubleshoot deployment and infrastructure-related issues.

Education:

Bachelor Of Technology in (ECE) [2018 – 2022]

Presidency University, Bangalore

Achievements:

- Awarded twice by TCS for Excellence in Learning and Technical Experimentation, recognised for contributions to DevOps research and automation initiatives.
- Received the **Elevate Wings Award** for achieving Distinction in Java and Spring Boot JWT internal wings1 assessments.
- Received the **Service & Commitment Award** for consistently delivering high-quality support and maintaining SLA compliance across multiple client engagements.

Declaration:

I hereby declare that the above particulars furnished are correct and true to the best of my knowledge.

Place: Bangalore
